

Carrying Case for Sharp Shape Foot Scanner

Sharp Shape, October 2011

Some customers asked us for recommendations on a carry case for our foot scanners. A custom-made case is very expensive. A pre-made fit case is hard to find. We have found a case that fit our current foot scanner. It is not a perfect fit. We wish it could be a couple of inches longer. The case is Pelican 1650. If you search keywords Pelican 1650 on the Internet (such as www.Google.com), you may find some suppliers. We have used one of them <http://www.pelicanproducts.us/detail.aspx118.html>. To be more specific, the model 1650E doesn't have foam inside while the 1650F has foam inside.

Because of the accessories (stand and other parts), it is a little hard to put everything inside. You have to use your imaginations. Better cushioning is a key for packing the scanner safely. The following is an example of the arrangements. The parts have to be on top of the scanner with a layer of hard foam in between (not shown).

You are not limited to this carrying case. We have different foot scanner models. You may have your special situations. We are not liable for being not fit. You may want to double check the dimensions before you order a case for your scanner.
