## Dimension and Weight of the Sharp Shape Foot Scanner (Model USB3D)

Copyright©, Sharp Shape, All rights reserves, November 14, 2012

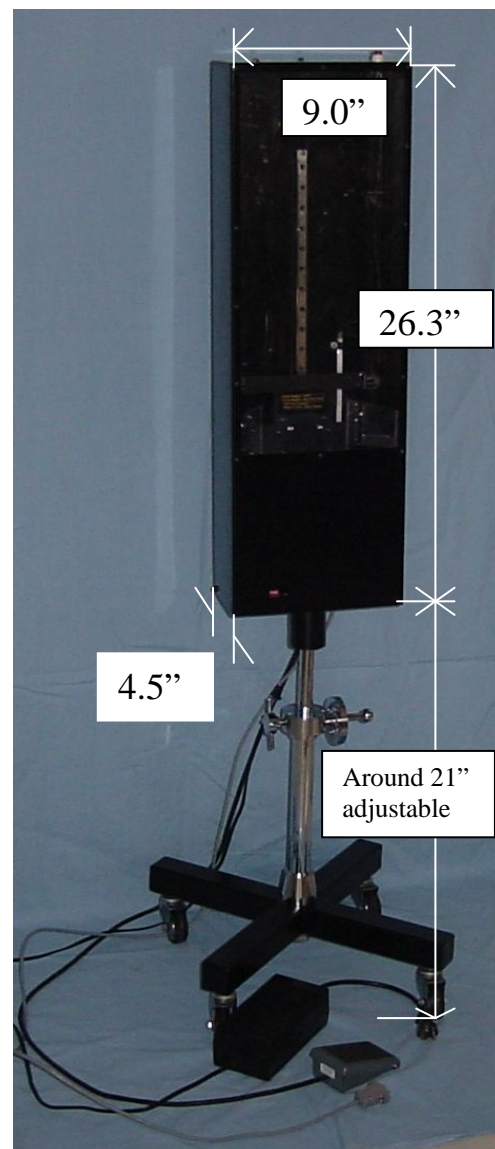

The picture of the 3D Laser Foot Scanner, model USB3D, is shown on the right. The dimensions are illustrated on the picture. Note that these are not precise measurements because there are switches, screws that can not be precisely measured.

The dimensions are usually needed when a customer wants to build a case, housing, or choose a suitable operating site. We suggest that if possible, you make some flexible room for the scanner, just in case there are variations.

The weight of the scanner body is about 8 pounds and the weight of the scanner stand is about 11 pounds. The total weight of the two shipping boxes (including body, stand, accessories, and packing material) is about 27 pounds.

The information shown in this document is subject to change without further notice.
